Wastesafe is the most advanced trash deflator / compactor on the market today. The Wastesafe system is a completely manually operated system that anyone can safely operate. This unique system reduces trash volume which decreases the number of trash pickups and / or dumpster size. It is currently in operation in Quick Service Restaurants from coast to coast.

The Pack-A-Drum System Starts at the front of the house with Dining Room Trash Can which facilitates the movement of waste from the dining room to the back of the house. Use of this system helps eliminate leaks and improves sanitation efforts throughout the restaurant. The cleaning caddy is attached to the trash can to perform cleaning within the dining room.

The Pack-A-Drum Trash Deflator is the heart of the trash management system. It provides approximately an 8 to 1 force conversion ratio. Simply place the trash in the Pack-A-Drum, close the top and turn the wheel to realize your savings. Pack-A-Drum's ease of use allows anyone to load and operate the unit. Approved for use by employees 16 years and older.

The Platform Cart provides a mobile transportation unit for movement of the deflated trash & broken down cardboard from the restaurant to the dumpster. The design of the cart assists the manager's in visually checking the trash for stolen items.

Customers currently using the Pack-A-Drum System include: McDonald's, Burger King, KFC, Wendy's, Denny's, Pizza Hut, Applebee's, Hardee's, Taco Bell and Chili's, to name a few. Whether you lease or purchase the Pack-A-Drum System you are guaranteed a great return on your investment
